Many references in the art disclose the apparatus and method for switching signals in the telecommunications switching network. Most of those references are comprising the switching unit, control unit, trunk/line ports, and input/output ports, such as that found in Shimojo et al. [U.S. 5,787,072], Chrin et al. [U.S. 6,600,741], Foladare et al. [U.S. 6,049,602]. But no prior art reference teaches the features of the claimed invention including the control unit responsive to a request signal from one of the user terminals for establishing in the switching unit a plurality of connections specified by the request signal between one of the diverging ports and a plurality of the converging ports.
